The image shows a screenshot of a web browser window. The address bar contains the URL `http://server/vutes/client/Paper.aspx`. The page title is "101 Introduction to Computing". Below the title, there is a header bar with "Question No : 41 of 50" on the left and "Marks: 3 (Bud)" on the right. The main content area contains the question: "What is the major obstacle in developing programming systems based on the declarative paradigm?". Below the question, there is a text input area for the answer, with a prompt "Answer (Please [click here to Add Answer](#))". At the bottom of the page, there is a rich text editor toolbar with various icons for text formatting, including bold, italic, underline, and font color, along with a font size dropdown set to 12 and a zoom level dropdown set to 100%.

QUESTION NO : 43 OF 50 marks: 3 (out of 10)

Since a controller is attached to a computer's bus, it can carry on its own communication with main memory during those nanoseconds in which the CPU is not using the bus; write the name of technique which controller use to access main memory?

Answer ([Please click here to Add Answer](#))

Normal Arial 12 B / U 100%

Since a controller is attached to a computer's bus, it can carry on its own communication with main memory during those nanoseconds in which the CPU is not using the bus. This ability of a controller to access main memory is known as direct memory access (DMA), and it is a significant asset to a computer's performance.
