Possible side effects of _____ deadlocks are low device utilization and reduced system throughput.

- A. Ignoring
- B. Avoiding
- C. Recovering
- D. Preventing**

Which of the following is correct definition for wait operation?

- A. wait(S) { while(S<=0); // no o S--; Page 108**
- B. wait(S) { S++; }
- C. wait(S) { while(S>=0) ; // no op S--; }
- D. wait(S) { S--; }

The -----scheme is not applicable to a resource allocation system with multiple instances of each resource type.

- A. Wait for graph Page 145**
- B. None of the given options
- C. Resource allocation graph
- D. Both Resource-allocation and wait-for graph

Semaphores are used to synchronize _____ processes.

- A. Tough
- B. Parallel
- C. Running
- D. Concurrent**

Following is not the classical problem of synchronization.

- A. Bounded buffer problem
- B. Reader writer problem
- C. Dining philosophers problem
- D. Counting Semaphore problem Page 118**

In Resource Allocation Graph, a _____ $P_i \rightarrow R_j$ indicates that process P_i may request resource R_j at some time in the future.

A. Claim edge Page 138

B. Request edge

C. Allocation edge

D. Assignment edge

_____ is used in the detection and recovery mechanism to handle deadlocks.

A. Circular Graph

B. Wait-for Graph Page 144

C. Claim Edge Graph

D. Resource allocation Graph

Typically monitor, a high level synchronization tool is characterized by _____ and _____.

A. Signal, wait

B. Local variables, semaphores

C. Global variable, local variable

D. Local data, programmer defined operators Page 125

In order to remove the problem like busy waiting, some high level synchronization constructs are defined. What are they?

Critical regions and Monitors Page 124

Critical regions and Semaphores

The integer value of _____ semaphores can not be greater than 1.

A. Mutex

B. Binary Page 117

C. Counting

D. Bounded buffer

بري صحبت سے تھائی بہتر ہے اور تھائی سے نیک صحبت بہتر ہے

Banker's algorithm is used for _____

- A. Deadlock removal
- B. Deadlock detection
- C. Deadlock prevention

D. Deadlock avoidance **Page 140**

_____ is an integer variable accessible through wait and signal which are atomic operations.

- A. Signal
- B. Mutex

C. Semaphore **Page 111**

D. Busy waiting

The _____ requires that once a writer is ready, that writer performs its write as soon as possible. In other words, if a writer is waiting to access the object, no new readers may start reading.

- A. first readers-writers problem
- B. third readers-writers problem
- C. fourth readers-writers problem

D. second readers-writers problem **Page 116**

A state is _____ if the system can allocate resources for each process in some order and still avoid a deadlock.

A. Safe **Page 134**

- B. Unsafe
- C. Mutual
- D. Starvation

_____ algorithm is used in Deadlock avoidance.

A. Bakery

B. Banker's **Page 139**

C. Safe Sequence

بري صحبت سے تھائی بہتر ہے اور تھائی سے نیک صحبت بہتر ہے

D. Mutual exclusion

Binary semaphore whose integer value cannot be can be _____ simpler to implement.

- A. >1** **Page 114**
- B. <1
- C. <=1
- D. >=1

Deadlock _____ provides a set of methods for ensuring that at least one of the necessary conditions cannot hold.

- A. Handling
- B. Avoidance
- C. Recovery
- D. Prevention** **Page 132**

The condition in which a set $\{P_0, P_1 \dots P_n\}$ of waiting processes must exist such that P_0 is waiting for a resource that is held by P_1 , P_1 is waiting for a resource that is held by P_2 , and so on, P_{n-1} is waiting for a resource held by P_n , and P_n is waiting for a resource held by P_0 . This condition is known as _____.

- A. Circular wait** **Page 131**
- B. Hold and wait
- C. No preemption
- D. Mutual exclusion

The problem of Deadlocks can be solved by _____ method(s).

- A. All of the given** **Page 132**
- B. Deadlock avoidance
- C. Deadlock prevention
- D. Allowing deadlock to occur, then detect and recover

بري صحبت سے تھائی بہتر ہے اور تھائی سے نیک صحبت بہتر ہے

The integer value of _____ semaphores can range over an unrestricted integer domain.

- A. Mutex
- B. Binary

C. Counting

Page 117

- D. Bounded buffer

If the system can allocate resources to each process in some order and still avoid a deadlock then it is said to be in _____ state.

A. Safe

Page 134

- B. Mutual
- C. Un-Safe
- D. Starvation

Wrong use of wait and signal operations (in context with semaphores) can cause _____ problem(s).

- A. Deadlock
- B. Mutual Exclusion
- C. Bounded Waiting

D. All of the given options are correct

Deadlock can be deal with _____ ways.

- A. 1
- B. 2
- C. 3
- D. 4

Page 132

The condition where a set of blocked processes each holding a resource and waiting to acquire a resource held by another process in the set, is termed as _____.

Deadlock

Page 130

Starvation

بري صحبت سے تھائی بہتر ہے اور تھائی سے نیک صحبت بہتر ہے

If a system is not in a safe state, there can be NO deadlocks.

False **Page 137**

True

Deadlock detection and recovery technique is exactly similar to deadlock avoidance technique to handle deadlock in the system.

True

False

A dashed line is used to represent a _____ in Resource Allocation Graph.

A. Claim edge **Page 136**

B. Request edge

C. Allocation edge

D. Assignment edge

Removing the possibility of deadlock in dining philosopher problem does not ensure the _____ problem will not occur.

A. Starvation **Page 123**

B. Critical Section

C. Bounded Buffer

D. Mutual Exclusion

In deadlock detection and recovery algorithm, a deadlock exists in the system if and only if the wait for graph contains a _____.

A. Node

B. Edge

C. Cycle **Page 147**

D. Graph

بري صحبت سے تھائی بہتر ہے اور تھائی سے نیک صحبت بہتر ہے

The process of holding at least one resource and waiting to acquire additional resources that are currently being held by other processes is known as _____.

- A. Circular wait
- B. Hold and wait**
- C. No preemption
- D. Mutual exclusion

Page 131

Variable names are ----- addresses.

- A. Relative
- B. Physical
- C. Symbolic
- D. Relocatable**

Google

Possible side effects of _____ deadlocks are low device utilization and reduced system throughput.

- A. Ignoring
- B. Avoiding
- C. Recovering
- D. Preventing**

Which of the following is correct definition for wait operation?

- A. wait(S) { while(S<=0) P/108 ;// no o S--;**
- B. wait(S) { S++; }
- C. wait(S) { while(S>=0) ;// no op S--; }
- D. wait(S) { S--; }

The -----scheme is not applicable to a resource allocation system with multiple instances of each resource type.

- A. Wait for graph**
- B. None of the given options
- C. Resource allocation graph
- D. Both Resource-allocation and wait-for graph

All of the given options are correct

Deadlock can be deal with _____ways.

- 1
- 2
- 3**
- 4

Page 132

The condition where a set of blocked processes each holding a resource and waiting to acquire a resource held by another process in the set, is termed as _____.

Deadlock **Page 130**

Starvation

The _____ protection scheme guards against a process trying to access a page that does not belong to its address space.

- A. Hybrid
- B. Primary**
- C. Tertiary
- D. Secondary

Page 169

Assume a logical address space of 16 pages of 1024 words, each mapped into a physical memory of 32 frames. Each word consists of 2 bytes.

What will be the total number of bits required for p (page number)?

- A. 4 bits**
- B. 8 bits
- C. 16 bits
- D. 32 bits

Page 166

Address Binding will be _____ in Multiprogramming with Variable Tasks (MVT)

- A. Fixed**
- B. Static
- C. Variable

بري صحبت سے تتهائي بهتر ہے اور تتهائي سے نيك صحبت بهتر ہے

D. Dynamic

The system maintains a _____ of all processes whose memory images are on the backing store or in memory and are ready to run.

A. Que

B. List

C. Ready que

Page 157

D. Environment

In _____, the library files are linked at load time.

Static Linking

Dynamic Linking

Main Memory is _____ memory.

A. Virtual

B. Volatile

C. Permanent

D. Non-volatile

Object files and libraries are combined by a ----- program to produce the executable binary

A. Linker

B. Loader

C. Compiler

D. Text editor

Memory protection in paging is achieved by associating _____ with each page. This bit indicates whether the page is in the process address space or not.

A. paging table

B. counting bits

C. segment table

D. Protection bits

Page 169

بري صحبت سے تتهائي بهتر ہے اور تتهائي سے نيك صحبت بهتر ہے

For More Help Contact What's app 03224021365

_____ consists of a large array of words or bytes, each with its own address.

- A. Data
- B. Stream
- C. Memory**
- D. Hard disk

Page 150

Logical memory is divided into blocks of the same size, called _____ .

- A. Pages**
- B. Table
- C. Frame
- D. Page size

Page 162

_____ is constrained by factors like quantum for RR scheduler and pending I/O for swapped out process.

- A. Rollin
- B. Rollout
- C. Kernel
- D. Swapping**

Page 157

----- register contains the size of the process

- A. Base register
- B. Index register
- C. Limit register**
- D. Stack pointers register

Page 13

What do we name to an address that is generated by the CPU?

- A. Logical address**
- B. Binary addresses
- C. Physical address
- D. None of the given options

Page 152

بري صحبت سے تھائی بہتر ہے اور تھائی سے نيك صحبت بہتر ہے

For More Help Contact What's app 03224021365

What do we name to an address that is loaded into the memory-address register of the memory?

- A. Logical address
- B. Physical address** **Page 155**
- C. Binary addresses
- D. None of the given options

A page table needed for keeping track of pages of the page table is called -----

- A. Page size
- B. 2-level paging
- C. Page directory** **Page 173**
- D. Page table size

In pages segmentation, the logical address is legal if d is _____segment length.

- A. Equal to
- B. Less than** **Page 180**
- C. Greater than
- D. Greater than or equal to

The collection of processes that is waiting on the disk to be brought into the memory for execution forms the -----

- A. Output queue
- B. Input queue** **Page 151**
- C. None of the given options
- D. Both input and output queue

-----points to the page table

- A. Page offset
- B. Translation look-aside buffers
- C. Page-table base register (PTBR)**
- D. Page-table length register (PRLR)

بري صحبت سے تنہائی بہتر ہے اور تنہائی سے نيك صحبت بہتر ہے

Physical memory is broken down into fixed-sized blocks, called-----
- and Logical memory is divided into blocks of the same size, called -----

- A. Pages, frame
- B. Frames, holes
- C. Frames, pages**
- D. Holes, segments

Page 165

External Fragmentation takes place in _____

- A. Paging
- B. Multi-tasking
- C. Multiprogramming with Fixed Tasks (MFT)
- D. Multiprogramming with Variable Tasks (MVT)**

Page 163

Addresses generated relative to part of program, not to start of physical memory are

- A. Virtual
- B. Physical
- C. Symbolic
- D. Relocatable**

The address generated by the CPU, after any indexing or other addressing-mode arithmetic, is called a -----address, and the address it gets translated to by the MMU is called a -----address.

- A. Valid, invalid
- B. Physical, Virtual
- C. Virtual, physical**
- D. Hexadecimal, Binary

Page 153

In ----- technique, memory is divided into several fixed-size partitions.

- A. Overlays
- B. Swapping

بري صحبت سے تھائی بہتر ہے اور تھائی سے نیک صحبت بہتر ہے

C. Multiprogramming with Fixed Tasks (MFT)

Page 160

D. Multiprogramming with Variable Tasks (MVT)

_____ is the separation of user logical memory from physical memory.

A. Rom

B. Virtual Memory

Page 185

C. Physical memory

D. None of the given options

In Overlay technique, we can overload any part of the program with the part of the program required needed recently.

True

False

If there exists a logical address space of 16 pages of 1024 words, each mapped into a physical memory of _____ frames.

A. 16

B. 32

Page 165

C. 48

D. 64

-----is the process of mapping a name to an address.

A. Routing

B. Binding

C. Memory

Page 194

D. Addressing

_____ is caused due to un-used space in physical memory.

A. MVT

B. Paging

C. External fragmentation

D. Internal fragmentation

بري صحبت سے تھائی بہتر ہے اور تھائی سے نیک صحبت بہتر ہے

Every -----generated by the CPU is divided into two parts: a page number (p) and a page offset (d).

- A. Page
- B. Logical address Page 163**
- C. Physical address
- D. Process address space

_____ is commonly implemented as demand paging.

- A. Paging
- B. Virtual Memory Page 185**
- C. Physical Memory
- D. Logical Addressing

The main memory is usually divided into partitions, one for _____ and other for _____ .

- A. Operating system, CPU
- B. Processes, Virtual Memory
- C. Base Register, Limit Register
- D. Operating System, User processes**

The run-time mapping from virtual to physical addresses is done by a piece of hardware in the CPU, called the -----

- A. Registers
- B. CPU Scheduler
- C. None of the given options
- D. Memory management unit (MMU) Page 155**

Cache is non-volatile memory.

False Page 153

True

بري صحبت سے تھائی بہتر ہے اور تھائی سے نيك صحبت بہتر ہے
