width of an element excludes padding, border and margin

In JQuery, Height() method returns:

height of an element excludes padding, border and margin

Which of the following feature is not part of the jQuery library?

HTML/DOM manipulation

CSS manipulation

Effects and animations

None of these given option

The jQuery library contains the following features:

- HTML/DOM manipulation
- CSS manipulation
- Effects and animations
- HTML event methods
- AJAX
- Utilities

Which of the following is/are example(s) of event?

Clicking on an element

What is meant by DOM traversing in jQuery?

Find the desired elements on the basis of their relationship with other elements.

_____ is used to insert content at the end of the selected elements.

Append()

_____ is used to insert content at the beginning of the selected elements.

prepend()

append() Inserts content at the end of the selected elements

prepend() Inserts content at the beginning of the selected elements

after() Inserts content after the selected elements

before() Inserts content before the selected elements

To traverse sideways in the DOM tree, _____ is not a function.

Siblings()

The next() method returns the next sibling element of the selected element.

The nextAll() method returns all next sibling elements of the selected element

The nextUntil() method returns all next sibling elements between two given arguments.

The prev(), prevAll() and prevUntil() methods work just like the **next(), nextAll(), nextUntil()** methods but with reverse functionality, they return previous sibling elements.

The three most basic filtering methods are **first(), last() and eq()**, which allow you to select a specific element based on its position in a group of elements.

filter() and not() allow you to select elements that match, or do not match, a certain criteria.

The first() method returns the first element of the selected elements.

The last() method returns the last element of the selected elements.

The eq() method returns an element with a specific index number of the selected elements.

The filter() method lets you specify a criteria. Elements that do not match the criteria are removed from the selection, and those that match will be returned.

The not() method returns all elements that do not match the criteria. The **not()** method is the opposite of **filter()**.

Which of the following is the default character encoding for XML documents?

UTF-8

All selectors in jQuery start with _____

\$() (dollar sign and parentheses)

What is the function of responseText in AJAX?

get the response data as a string

responseText

get the response data as a string
