Can we count a single logical file as both EIF and ILF for the same application?

Answer:

No we can not because the for ELF the file must be out of the boundary of the system while for ILF it should be within the boundary.

Does software quality depend only on the source code? Comment on it.

Answer:

Yes, software quality depends on source code as well as GUI and the system to be deployed upon and other factors as well.

If the source code is not written in an effective way and lines of code can be decreased for the same functionality there is a chance of making the system work faster. Moreover if coding conventions are not followed it will give a tough time in maintaining debugging and updating etc.

Can we ensure 100% risk free software development process, i.e. can we guarantee that during the entire software development process there will be no occurrence of any risk. Comment with reasons.

Answer:

No we can not make it 100% but we can minimize is to a large extent. Risk is something that has not been happened but there is a possibility that it could occur and cause the function to fail. So for unidentified issues it is a harder to control than for the identified issues.

“Two software applications having same size in Function points unit may have different number of lines of code”. Do you agree or not? Provide reasons for your answer.

Answer:

Lines of code is not function dependent alone. It depends on the programming language, programming skills and experience of developer so i dont agree with that.
