

CS621 LIVE (QUIZ 1) MCQs

Past papers for all subjects are also available

03184148783

❑ In a distributed memory architecture, each processor has its own:

- Direct access memory
- Random access memory
- Global memory
- Local memory

❑ _.- is a type of memory architecture that allows multiple processors or threads to access the same memory space:

- Read only memory
- Direct memory access
- Shared memory
- Random Access memory

❑ What is the conventional architecture made up of?

- Processor and data-path
- Processor and memory system
- Memory system and data-path
- Processor, memory system, and data-path

❑ The process by which multiple machines can process the same function at the same time is known as:

- Caching
- Deadlock
- Scalability
- Concurrency

❑ One of the primary issues of concurrent programming is identifying a natural _____ for the software solution at hand:

- MBS (Memory Breakdown Structure)
- WBS (Work Breakdown Structure)
- WMS (Work Merge Structure)
- MMS (Memory Merge Structure)

❓ What is a GPU?

- A central processing unit
- A graphics processing unit
- A general processing unit
- A type of input device

❓ Parallel processors collectively have large and fast_____.

- Instruction sets
- cache
- cooling system
- clock speed

❓ In distributed computing, computers communicate with each other through:

- direct memory access (DMA)
- message passing
- control unit

❓ ___ is the measure of a system's ability to increase or decrease in performance and cost in response to changes in application and system processing demands:

- Multithreading
- Caching
- Deadlock
- Scalability

❓ With multiple computers, _ is(are) implemented to ensure that a single failure doesn't equate to systems-wide failure:

- redundancies
- sparseness

Past Papers for Mids./Finals are also Available

Miss Mehwish: 03171491481

- O heterogeneity
- O inadequacy
